MY GARDEN

My bluebells of Scotland raise their cups
To the matching blue of the sky,
While the Baby Breath reflects itself
In the white clouds passing by.
When the poppies match the sunset's hue
The whole garden waits for evening dew.
My sweet peas blend with the sunrise pink.
Pansies remember the velvet of night.
Forget-me-not's fragrance spreads with the dawn,
And daisies and lilies turn to the light.
Where is the one who would ever dare.
To doubt for one moment that God is there?

—Grace Maxine Holloway
Dallas, Texas

“*T*HERE should be—there will be—millions of little gardens for the satisfaction of men and women, and to furnish ‘flowery pathways’ for the feet of children.” So writes Mrs. Francis King, one who is wise in garden lore.

Can't you see them in your mind's eye? Charming gardens—gay gardens—prim gardens: shrubbery, flowers, trees in colorful array. And health and happiness for the entire family. . . .

It is so we visualize thousands and thousands of gardens in this section of the country: and because of our many years' experience as producers of planting materials, and our intimate and extensive knowledge of plants, we feel it is our duty, in a measure, to help home-gardeners.

For this reason, we have planned a series of monthly “talks” that will suggest many interesting and effective ways for planting, as well as care of plants, shrubs and evergreens.

Our first message was sent last October, and we plan to send you one each month, except for the two months of January and September; these months you will receive our Spring and Fall Planting Guides. We hope you have already looked over carefully the ones you have already received, and kept them for future reference. Perhaps you have started a “Vestal Scrapbook” with the monthly “talks” bound together. We think this would make a really helpful reference file.

It is our desire, through these friendly messages, to establish a more personal bond of service. We want folks to think of us, not only as Vestal's, The Home of Beautiful Roses—not only as horticulturists, cultivating over 5 acres of greenhouses and more than 500 acres of farms and nurseries; but also as a very human organization composed of individuals, each of whom is anxious to help you make your gardens more beautiful—more successful.

And of course, whenever you are ready to buy roses, house plants, plants for sunroom or greenhouse; hardy shrubs and evergreens for lawn and garden, or reliable seeds—you can depend on securing superior quality at a reasonable price from Vestal's. We should be delighted to serve you.

Yours for better gardens,

JOS. W. VESTAL & SON

VESTAL ROSES are famous the country over. Nowhere else can you find roses as hardy, vigorous, full of life and as fragrant as here at Vestal's greenhouses. For over sixty years the rose has been our leading specialty, each year growing over one-half million rose plants for southern gardens. Many of these famous southern rose gardens are planted exclusively with Vestal Roses; this alone is your assurance that our rose plants will give you complete satisfaction. As long as the rose exists it will retain its dominant grip upon the affections and appreciation of the human race. The rose is the most beautiful of all flowers; no garden is complete without them.

Rose Novelties

PETIT JEAN The color is a deep orange-buff shaded to yellow, and every individual petal edged and bordered with peach pink. The flowers are of beautiful shape, large and full, yet open well. The colored edging gives the flowers, when fully opened, a wonderful appearance and innumerable rose-lovers have been enthralled by the sight of a bed with the old flowers left on the plants. At times the pretty pink shading is more pronounced, but the flower is always beautiful. Price, one-year plants, 35c each, 3 for \$1.00; two-year plants, \$1.00 each, 3 for \$2.50.

MRS. U. M. ROSE Named in memory of one of Little Rock's most beloved citizens. This magnificent new rose of our own introduction was offered last year for the first time. The buds are long and shapely, opening to perfect double flowers of a brilliant rose pink. During cool weather its color is a rich pink which is almost a red, vigorous habit of growth, and adaptable to various climatic conditions. The flowers are very fragrant and lasting. Without a question one of the best garden roses that has been produced in many years. One-year, 25c each, 3 for 60c; two-year, 75c, 3 for \$2.00.

JOANNA HILL An ideal American rose that makes an instant appeal by its charming combination of colors. The color is a clear yellow deepening at the center to a rich golden orange. The buds are large, very long pointed, of perfect shape and wonderful keeping qualities. Growth vigorous, free and continuous flowering. Price, one-year-old plants, 25c each, 3 for 60c; two-year-old plants, 75c each, 3 for \$2.00.

PRESIDENT HERBERT HOOVER A glorious rose, wonderfully free in the easy manner in which it grows and charming in its color arrangement which is a splendid combination of cerise-pink, flame, scarlet and yellow; this combination of colors gives the most dazzling color effect imaginable. The buds are beautifully pointed, the flowers large, composed, of broad thick heavy petals, with an exquisite fragrance. It is exceptionally free-flowering, and everyone will be delighted with its habit of growth. Awarded the Gold Medal at the International Flower Show in New York, 1929. One-year plants, 40c each, 3 for \$1.00; two-year, \$1.00, 3 for \$2.50.

GOLD STAR A beautiful, distinct, new yellow Hybrid Tea that has proven especially good for garden planting. Its large, double flowers are borne singly on long, strong stems. The orange-colored bud opens to a full golden yellow bloom deeper in center with orange splashings on back of petals. Growth most vigorous and compact; very free bloomer. Healthy, lustrous foliage. We predict a real future for this new rose. Two-year plants, \$2.50 each.

TALISMAN The rose which created a sensation in all shows during 1928 and 1929 and which was awarded more Gold Medals than any other American rose yet introduced, including the President Coolidge Medal in 1928. It is a most remarkable piece of coloring; a combination of shadings of gold, apricot, yellow, deep pink and old rose. The bud is long, well formed and develops into full double flowers. The plant is a strong grower, with glossy green foliage and free flowering, and the past season has demonstrated its value as a bedding rose. One-year plants, 35c each, 3 for \$1.00; two-year plants, \$1.00, 3 for \$2.50.

LUCYLE We like its large flowers of deep, even pink, almost the same shade as Premier or Mrs. Charles E. Russell, with petals of strong, leathery substance, which do not fade in hot weather. In this respect it resembles the other new pink rose, Mrs. U. M. Rose. The plants are of excellent habit and very free-flowering. One-year, 50 cents each; two-year plants, \$2.00.

MARGARET M'GREDY Gorgeous orange-scarlet or intense brick-red. Very large, of globular, cupped flowers with more petals than Padre or any other Rose of similar color. Very vigorous growth. A most promising new variety. One-year plants, 40c each; two-year plants, \$1.00.

KONIGIN LUISE Very large, ovoid buds and double, high-centered, snow-white flowers, only faintly tinted with lemon in the center. Bushy and extremely free flowering. One-year plants, 25c each; two-year plants, 75c each.

MRS. C. W. EDWARDS Pointed buds and vivid, dark rose blooms of moderate size with a brilliant golden suffusion in the high-pointed center, giving a distinct coppery red effect. Strong, bushy, and healthy. One-year plants, 40c each; two-year plants, \$1.00 each.

Mrs. U. M. Rose

Roses (Cont'd)

CALEDONIA Bud large, long-pointed; flower large, extremely double, high-centered, very lasting, slightly fragrant, white, borne singly on long, strong stem. Foliage sufficient, large, dark green, leathery, disease-resistant. Few thorns. Vigorous, upright grower; abundant, continuous bloomer. Price, one-year, 40 cents each; two-year, \$1.00 each.

GRACE NOLL CROWELL A rose of our own production, the freest blooming large rose we have yet seen. In color it is a brilliant rose with petals heavily veined with vinous crimson while the base of petals is shaded primrose-yellow. The reverse of the petals are suffused with silvery tones. A feature of this rose is the absence of deformed buds and flowers. Every bloom is perfect. A giant in growth, producing many heavy canes from base of plant. One of the finest decorative roses yet produced. One-year, 25c, 3 for 60c; two-year, 75c, 3 for \$2.00.

CYNTHIA ANN PARKER Our new double white rose. Flowers are almost perfect in form, with a high center, and immense size. Blooms all the time. Good, robust grower. Clear snow-white with a lemon tinge; as the flowers age they become pure white, the blooms are even larger than Paul Neyron. Its habit is absolutely perfect, and the freedom with which it flowers is marvelous. We consider this rose the grandest of all white roses for bedding. For size and substance it has no equal. Is very sweetly perfumed. Beautiful long pointed buds on tall, stiff stems. An excellent rose for cutting. Price, one-year-old, 25c each; two-year-old, 75c.

MARGARET BELLE HOUSTON In the Margaret Belle Houston we have a rose that possesses a rich and lasting crimson color, coupled with vigor of growth, robust constitution, and free-blooming habit. The color is magnificent, rich velvety-crimson, retaining its brilliancy throughout the season. The fragrance is delightful and refreshing. The flowers are borne on long stems and keep in good condition a long time when cut. The growth is splendid, sturdy and healthy, the foliage large and abundant. Price, one-year-old, 20c; two-year-old plants, 75c.

JOANNA TROUTMAN This fine novelty is without doubt the deepest of all yellow roses yet produced, holding its color to the very last. It is a fine grower of free-branching habit, with beautiful bronzy green foliage practically immune from mildew. Strictly ever-blooming, every shoot being crowned with a flower. Buds long and pointed, of deep copper color. Flowers, when expanded, of the richest orange-yellow ever seen in a flower. One-year, 25c; two-year, 75c.

Joanna Troutman

Grace Noll Crowell

MRS. PERCY V. PENNYBACKER A rose of our own production, which, like our other new sorts, is a fine grower, with stout thornless canes coming freely from the base of the plant. Color beautiful peach-pink with silvery suffusions, a shade which makes many other pink roses look commonplace. Remarkable for its lasting qualities, either cut or on the bush. One-year old plants, 20c; two-year-old plants, 75c.

Little Rock, Arkansas.
Gentlemen:

The plants ordered from you reached me yesterday in first class condition and I am writing this to you that you may know I really appreciate the way they were packed and the fine condition in which they arrived. I presumed they would be a great deal smaller plants and was greatly surprised at the size of them, the quality and quantity are immense.

Kindly forward me one of your catalogues. There are other things I wish to have and think I shall try out the Magnolia trees.

Very sincerely yours,

Apricot and Golden Orange Roses

Mrs. Aaron Ward

LADY HILLINGDON Everybody can grow it. It has long willowy stems that are in no sense weak, as the buds are held upright; has a long slender pointed bud of brilliant deep golden-yellow, and a striking peculiarity of this rose is that each day the golden-yellow color becomes deeper yellow and more intense, unlike all other yellow roses with which we are familiar, as invariably the tendency after being cut is to get lighter in color. Price, one-year-old plants, 20c each, 3 for 50c; two-year-old plants, 60c, 3 for \$1.50.

MRS. AARON WARD This rose is a real joy to the grower and absolutely distinct. One of the most delightful roses of recent years, in color that catches the eye at once. Coppery-orange in the open bud, golden-orange when partly developed, pinkish fawn of lovely shade when fully open, when it looks like a full fluffy rosette. No wonder everybody that sees it falls in love with it. Price, 20c for one-year-old plants, 3 for 50c; 60c for two-year-old plants, 3 for \$1.50.

MAD. MELAINE SOUPERT The strong, vigorous plants form symmetrical bushes, with an abundance of heavy, dark foliage, and the superb, large, globular flowers are borne on stiff erect stems. The form is distinct and elegant, and the fragrance delicious. Color golden-yellow suffused with faint shades of pink. Price, one-year, 20c each, 3 for 50c; two-year, 60c each, 3 for \$1.50.

JOANNA HILL. See page 3.

REV. F. PAGE-ROBERTS Copper-red buds of great length, opening to golden yellow blooms stained outside with red, fully double, and very large; fragrant. Strong, branching plant with healthy foliage. One-year, 25c; two-year, 75c.

JOANNA TROUTMAN. See page 4.

SUNBURST "Stands head and shoulders above all." This magnificent giant-flowering rose stands head and shoulders above all other roses of its class. It is a constant blooming variety. It has all the good points of merit; a fine long-pointed bud; producing fragrant blooms of an especially deep color throughout on long stems; extraordinary, vigorous and healthy, and belongs in the class of big roses. The color is a beautiful orange-copper, golden-orange and golden-yellow, large intense shades, and brilliant in effect. Price, strong one-year plants, 20c each, 3 for 50c; two-year plants, 60c each, 3 for \$1.50.

SENATOR MASCURAND Yellow Hybrid Tea Rose, the center of the bloom resembling the color of the yolk of an egg, toning to high sulphur-yellow. Large, full, globular blooms. A strong, healthy grower and very free bloomer. Blooms of large, perfect shape. Perfectly hardy. Price, one-year, 20c each, 3 for 50c; two-year, 60c each, 3 for \$1.50.

SOUVENIR DE PIERRE NOTTING Marvelously beautiful flowers of the Maman Cochet type, very large and well filled, opening beautiful clear apricot yellow tinged with golden, mixed with orange-yellow, edges of petals shaded carmine-rose. Truly a gorgeous effect. The bush is strong and upright in growth, with heavy canes, and bears a great profusion of these magnificent roses all summer long. It can always be depended upon for a supply of cut flowers. Price, one-year-old plants, 15c each, 3 for 40 cents; two-year-old plants, 60c each, 3 for \$1.50.

Lady Hillingdon

Crimson Roses

ARTHUR COOK Bud large, long-pointed; flower very large, extremely double, very lasting; deep velvety crimson with a beautiful sheen; long stem; strong fragrance. Price, one-year, 20c, 3 for 50c; two-year, 60c, 3 for \$1.50.

CHAS. K. DOUGLAS Fine, long-pointed buds opening to large, loosely formed flowers of striking crimson-scarlet; slightly fragrant. Strong, branching growth and an abundance of healthy foliage. A particularly fine red garden rose with great depth of petals and clear, unfading color. Price, one-year, 20c each, 3 for 50c; two-year 60c, 3 for \$1.50.

CRUSADER A Wonderful Crimson. A big strong-growing variety, robust and rugged in every characteristic. The growth is heavy and the flower stems are strong and heavy, producing very little blind wood. It is free-growing and free-flowering, and the blooms are truly characteristic of the variety—big and double, and, in color, a rich, velvety crimson. These large heavily petaled blooms open perfectly and are amply supported by the strong-necked heavy flower growths. Price, one-year, 25c, 3 for 60c; two-year-old plants, 60c each, 3 for \$1.50.

ETOILE DE FRANCE One of the best and sweetest hardy roses of its color. The strong, upright bushes have beautiful bronze-green foliage, which is not subject to insect attacks. The bushes are blooming constantly, producing large, massive, deep, full cup-formed flowers on magnificent long, stiff stems. They are of truly glorious form and delightful fragrance, while the color is exquisite—a clear red of velvety crimson. Price, one-year-old plants, 20c, 3 for 50c; two-year-old plants, 60c each, 3 for \$1.50.

ETOILE DE HOLLANDE Brilliant red blooms of magnificent size, perfect in half-open state, showing clean, attractive centers when fully open; petals enormous; very fragrant. Plants branching, particularly free-flowering and healthy. A splendid rose with no apparent faults. Color holds remarkably well, becoming lighter instead of bluing. We have too few good roses. This one has a future. Towards fall the flowers are larger, fuller and darker red. Do not overlook it. Price, one-year-old plants, 25c each, 3 for 60c; two-year-old plants, 60c each, 3 for \$1.50.

GRUSS AN TEPLITZ Medium-sized double blooms of brilliant crimson with velvety shadings and intense fragrance. Blooms in open clusters with the utmost freedom throughout the whole season. Bush extremely vigorous and hardy. One-year, 20c, 3 for 50c; two-year, 60c, 3 for \$1.50.

HADLEY In the Hadley we have a rose that possesses a rich and lasting crimson color, coupled with vigor of growth, robust constitution, and free-blooming habit. It will be welcomed alike by the grower who forces roses under glass for cut flowers

Lord Charlemont

and the one who plants outdoors for summer flowers. It is a development of a strain of red roses, including Liberty, General McArthur and Richmond. The color is magnificent, rich velvety-crimson, retaining its brilliancy throughout the season. The fragrance is delightful and refreshing. The flowers are borne on long stems and keep in good condition a long time when cut. The growth is splendid, sturdy and healthy, the foliage large and abundant. Price, one-year-old plants, 20c, 3 for 50c; two-year-old plants, 60c, 3 for \$1.50.

E. G. HILL The flower is dazzling scarlet shading to a deeper pure red as it develops. It produces long stems naturally and the foliage develops freely and is of fine color. A great producer and an unusually good keeper, as was shown when it was up for exhibition. The bud is unsurpassed in beauty—except by the open flower, which is a wonder! One-year plants, 35c each, 3 for \$1.00; two-year plants, 75c, 3 for \$2.00.

MARGARET BELL HOUSTON. See page 4.

LARENT CARLE A beautiful rose, with extra large, handsomely formed, rich velvety carmine buds and flowers. It is a phenomenally strong and robust grower, hardy in every locality and continually in bloom. Every lover of roses should have this variety. Price, 20c each, 3 for 50c; two-year plants, 60c each, 3 for \$1.50.

RED COLUMBIA A brilliant scarlet-crimson of exquisite shade, a sport from Columbia; semi-double, one of the free-bloomers in existence; produces beautiful foliage in profusion. One-year plants, 25c each, 3 for 60c; two-year plants, 75c each, 3 for \$2.00.

TEMPLAR High pointed buds, large petals, thoroughly fragrant. A comparatively new rose, of bright velvety crimson. Owing to its rich coloring this is a wonderful garden or bedding rose. There is no color that produces the show that a good crimson does. The color is a rich, bright, velvety crimson. A magnificent rich crimson, flushed scarlet, with well-shaped buds, carried erect and opening into a large beautifully shaped flower. Very free flowering; growth bushy and upright. A splendid rose with no apparent faults. One-year plants, 25c each, 3 for 60; two-year plants, 75c each, 3 for \$2.00.

YELLOW MAMAN COCHET (Alex H. Gray). One of the best hardy everblooming yellow roses. It is ideal for open ground culture—a typical Cochet Rose.

WHITE MAMAN COCHET. A most magnificent snow-white rose, with sometimes a faint tinge of pale blush.

PINK MAMAN COCHET. The buds are large, full and firm, elegantly pointed, showing depth and richness as they expand. The superb flowers open perfectly double, are extra large and of splendid substance; clear rich pink, changing to silvery-rose.

JOSEPHINE VESTAL In this magnificent rose we find a rose of attractive coloring. In our estimation, this new rose has the brightest future of any rose introduced for the last quarter century. The color is one so difficult to describe that any description can only be a partial one, and gives but a faint idea of the superb beauty and richness of the shades. It might be described as salmon-flesh tinted rose, with a touch of yellow at the base. Buds of unusual attractiveness, opening full and double, like the old Malmaison, but decidedly brighter; unusually long and beautifully pointed with petals of wonderful depth and substance, retaining their shape longer than most roses. The variety is of fine branching habit and ideal growth, a beautiful and most bushy rose. Its color is not its only charm as its fragrance fills the room with a delicate pure rose perfume. Price, one-year plants, 30c each, 3 for 75c; two-year plants, 60c, 3 for \$1.50.

MADAME BUTTERFLY New, fancy colored rose. A glorified sport of Ophelia with all the colors of Ophelia intensified, making it a harmony of bright pink, apricot and gold. A free-grower and bloomer with large handsome foliage free from mildew. It averages more petals to the bloom; it produces more blooms to the plant, because it makes more branches, every one carrying a bud. The buds are a lovely shade of Indian red, yellow at the base; they are unique for corsages and for low table decorations; the opening flowers are perfect in form and texture, clear and brilliant in color, and of delicious fragrance. Price, one-year, 20c, 3 for 50c; two-year, 60c, 3 for \$1.50.

GRANULATED PEAT MOSS For Better Gardens

Roses are rank feeders and thrive best in clay loam well enriched with a compost of GPM, bonemeal and manure. Plant in the open (Spring or Fall) but first "fine" the soil to a depth of 12 to 15 inches. The GPM contributes to the formation of humus in the soil, makes the soil friable and porous and acts as a reservoir for the liquid manure or other fertilizers used to supply the necessary plant food. It keeps the soil moist and cool which promotes luxuriant growth and abundant flowering.

Keep Roses well mulched with GPM—the perfect mulch. It takes the shock of the hot sun from the roots, assures a constancy of soil moisture through capillarity, lessens troublesome weeding and prevents the surface from baking or crusting. In Fall, after the frost has entered the ground, mound GPM about each Rose plant to a height of 6 to 10 inches—it affords protection from winter-kill. In spring it can easily be removed without danger of breaking away any young tender shoots that may have started into growth. Professional growers are never without GPM and amateurs tell us very candidly that its use lightens work and improves the blooms.

The GPM brand Granulated Peat Moss is sold in bales that are tightly compressed, burlapped on all sides, wire strapped and sticked and contain 19 to 20 bushels of material when loosened, which is sufficient to cover about 300 square feet one inch deep.

Price per bale, \$5.00, by express or freight.

LADY DIXON-HARTLAND Bud long-pointed; flower opens well, high center, fragrant, deepest salmon at center shading to pale pink on outer petals. Abundant, continuous bloomer. One-year plants, 20c each, 3 for 50c; two-year, 60c each, 3 for \$1.50.

RAPTURE A second generation sport of Ophelia through Butterfly. One of the big sales-houses in New York City finds that this very striking sport outsells every other "fancy" rose in the store—it is intensely brilliant in its vivid coloring of bright apricot, coral, rose and gold; it has more petals than its parent, and produces more blooms per plant than Butterfly. One-year, 25c, 3 for 60c; two-year, 60c, 3 for \$1.50.

VICE PRESIDENT CURTIS A startling novelty with vivid orange and apricot buds, opening to brownish yellow flowers, strongly shaded with copper-pink. This new variety has created a decided stir wherever it has been seen, and we believe it will be widely popular in this country. One-year, 25c; two-year, \$1.00.

WM. R. SMITH Whether you live East, West, North or South, whether you wish one rose or 1,000, here is a rose which has our unqualified endorsement. It will thrive abundantly in almost any reasonable location. The flowers are large, full and double, and most exquisitely formed. The petals are so firm they look like wax, softly curled, colored cream with flesh tint tips, buff-yellow base and the center a heart of pink. Perfect buds. The flowers are borne on long, strong stems, just right for making bouquets. Fragrance is delightful. You will admire the foliage, too—deep green leaves on red stems and the new growth of rich garnet; the plant will grow for you vigorously, is almost the hardiest of this class, and blooms abundantly. Price, one-year-old plants, 20c each, 3 for 50c; two-year-old plants, 60c each, 3 for \$1.50.

Second Weber is in praise of her. Rosy-salmon or flesh-pink in color, of the general type and color of "My Maryland." The bud is long and pointed, opening into enormous blooms, which deepen its color until fully expanded, when it is as impressive as an "American Beauty." The texture of the rose is very thick and heavy and the form of the petals peculiarly beautiful. A great garden rose. Price, one-year plants, 20c each, 3 for 50c; two-year plants, 60c, 3 for \$1.50.

Vestal's Everblooming Climbing Roses

Mrs. Robert Peary

We have had so many letters asking for a list of monthly blooming Climbing Roses that we have decided to divide our climbers into everblooming and annual blooming varieties. The so-called monthly or everblooming Climbing Rose does not bloom continuously like the bush varieties, but with proper pruning can be made to bloom sparingly through the Summer and again in the Fall with a crop of blossoms almost equal to the Spring crop. In most instances the Fall blooms are larger and finer than those produced in the Spring.

CLIMBING SUNBURST A climbing sport of that peer of yellow roses, Sunburst—the much-sought new French rose. A true pillar rose of strong growth, bearing freely; very large cadmium yellow flowers, beautiful either in bud or open flower. One-year-old plants, 20c, 3 for 50c; two-year-old, 75c, 3 for \$2.00.

CLIMBING PREMIER The blooms are immense, often measuring 5 and 6 inches across the open flower; buds long, full and pointed. Color rich, deep rose-pink, without shadings, which is retained well, except in excessive heat. Growth is very vigorous. This rose is a profuse bloomer, and the beauty of its blooms is seldom equaled. No rose garden is complete without it. Price, one-year, 30c, 3 for 75c; two-year, 75c, 3 for \$2.00.

CLIMBING MAD. CAROLINE TESTOUT Brilliant satiny rose, deepening at center and bordered with silvery rose; immense broad petals and extremely large flowers. Price, 20c each, 3 for 50c; two-year, 75c each, 3 for \$1.50.

CLIMBING WOOTTON To our mind, this great rose is to be classed with Mrs. Robert Peary and other great climbing varieties. It is a strong, rampant climber, growing in one season to a height of from ten to fifteen feet, with large, heavy, insect-proof foliage. It produces in most wonderful profusion its superbly-formed flowers, which are bright magenta-red, passing to violet-crimson, richly shaded. The flowers are large, full and regular, with thick, leathery petals, and deliciously scented. Make beautiful buds. Price, 20c each, 3 for 50c; large size, 75c each, 3 for \$2.00.

MARECHAL NIEL "The Famous Rose." The fame of the superb yellow rose Marechal Niel, with its large, deep golden-yellow flowers, is world wide. It is almost universally held to be the finest rose for indoors or outdoors, where the climate admits of its cultivation. Its magnificent golden-yellow flowers are almost massive in dimensions, and reports from growers tell of single plants showing one to two thousand blooms at a time. It is of strong growth and beautiful foliage. It is grand in petal, shape, color, fragrance, lasting qualities and size, an extremely free bloomer, and flowers throughout the season. Contrary to many roses, which lose their color after opening, Marechal Niel decidedly improves and takes a deeper yellow after being kept for a day or two. The tea fragrance is strongly present in this rose. It is a variety which practically stands by itself. Price, 20c each, 3 for 50c; stronger plants, 50c, 3 for \$1.25; two-year-old plants, \$1.00, 3 for \$2.50.

MRS. ROBERT PEARY Climbing Kaiserin Augusta Victoria. A great white hardy everblooming climbing rose. The first white hardy everblooming rose. It is an offspring of that grand variety, the best pure white hardy everblooming rose, Kaiserin Augusta Victoria. The flowers are something grand; they are the equal of the finest and most beautiful cut flower roses; of splendid substance; extra large, full, deep and double and are produced on long, stiff stems. Buds are long and pointed. In bud and flower it is truly beautiful; has a delicious fragrance—just like cherry blossoms. If you want a quick-growing, hardy climber, sure-to-bloom rose, one that will give you flowers this season, this is the only white variety that will do it. Price, 30c each, 3 for 75c; large size, 75c, 3 for \$2.00.

CLIMBING COLUMBIA This rose is a sport of the well-known Hybrid Tea Rose, "Columbia," and has all the desirable features of its parent, with a remarkable climbing tendency, growing 10 to 15 feet in a single season. Foliage deep glossy green, immune from disease and insects. Hardy in any location. Blooming with the greatest freedom the entire season, equally as well in the far South as in the North. Buds and blooms of immense size, often measuring six inches in diameter, and perfect formation, borne singly on long shoots, thus making it an ideal one for cutting. Buds long and pointed, same as "Columbia," opening full and double. Petals large. Color, clear imperial pink with paler edges, beautifully dark veined; delightfully fragrant. Price, strong first size or one-year-old plants, 30c each, 3 for 75c; two-year size 75c each, 3 for \$2.00.

REINE MARIE HENRIETTE A strong growing and climbing rose, making a grand pillar rose in the South. Flowers full and well-formed; rich, brilliant crimson. A grand rose and a fine companion to Marechal Niel. Try it. Price, 20c each, 3 for 50c; large size, 75c each, 3 for \$2.00.

CLIMBING PINK RADIANCE This grand, giant-flowering rose stands head and shoulders above all other roses of its class. The flowers, which are all splendid form, are large and full, and somewhat of the June Rose type. A lovely rose-pink color. A fine variety, especially on account of its value as a summer cut-flower variety. Very free in growth and production of bloom, has good habit, and the lasting qualities of the flowers are wonderful. Extremely clear. Sweet scented. Price, one-year, 25 cents each, 3 for 65 cents; two-year, 75 cents each, 3 for \$2.00.

Hardy (Annual Blooming) Varieties of Climbing Roses

Chaplin's Pink Climber

Your yard or garden may be too small to warrant the outlay of space sufficient to express your appreciation of roses in bush form. Hardy climbing types need only a foothold; the long canes will twine and cling to any little trellis assistance and spread charming clusters over yards of wall space, and will hang in festoons along the eaves of your porch roof. One thing we want to impress upon you, and that is that continuous bloom in a rose is not its only merit. We do not expect other floral treasures to be with us all the time. We of the South value our Bougainvilleas, Crepe Myrtles, Magnolias, Poinsettias and Cape Jasmines, when they come, but we do not insist that they must bloom for us twelve months in the year. So it is with the hardy Climbing Roses. One full blooming season for such a rose as Paul's Scarlet Climber is equal in beauty, for this one period, all the care and attention it requires the rest of the year, and with lots of other hardy climbing varieties.

CHAPLIN'S PINK CLIMBER Unquestionably the most important acquisition in climbing roses since the introduction of Dr. Van Fleet and Paul's Scarlet Climber, universally recognized as the most popular climbing roses, and to which Chaplin's Pink Climber will prove an equally valuable companion. It is a cross between Paul's Scarlet and American Pillar, of strong growth, perfectly hardy, producing its large flowers, similar in size and form to Paul's Scarlet, profusely in strong trusses of from 8 to 12 flowers each, but in color a rich lively pink. At the Spring Show of the National Rose Society of England in 1928 it was the outstanding feature among the new roses and was awarded the Society's Gold Medal. One-year plants, 20c each, 3 for 50c; two-year plants, 60c each, 3 for \$1.50.

AMERICAN PILLAR Single flowers of rich rosy-pink, approaching brilliant carmine, just a glint of white in the center, and long stamens of beautiful golden-yellow. The blossoms—four to six layers deep—are arranged in large flowered clusters all over the plant. A tremendous grower; with its thick, vigorous canes, it is without doubt one of the most valuable single climbing roses

in existence, and is unsurpassed for planting singly or as a hedge. One-year plants, 20c; two-year plants, 60c.

ALIDA LOVETT Both buds and flowers are large, are of ideal form, are held on stiff stems a foot and a half to two feet long, and the color is a lively bright shell-pink with shadings of rich sulphur at the base of the petals—a combination that is both novel and beautiful. The flowers are of remarkable substance and long-lived, whether cut or left to remain upon the plant, and are pleasantly perfumed. It is very much brighter than those of the justly popular Dr. Van Fleet Rose. Price, one-year, 20c, 3 for 50c; two-year, 75c each, 3 for \$2.00.

BESS LOVETT Is of strong growth, with large, glossy silver moon-like foliage, and, what is remarkable in a climbing rose, the flowers are exquisitely fragrant. Flowers are lavishly produced, are of good size, double, full and cupped form, being similar in make-up to the Climbing American Beauty, but very much brighter red in color and more fragrant by far. The roses, which are very lasting, are also very beautiful in bud and are borne on long stems, hence are admirable for cutting. Price, one-year, 20c, 3 for 50c; two-year, 75c each, 3 for \$2.00.

CLIMBING AMERICAN BEAUTY Large flowers, each produced on separate stems; vivid rosy-crimson in color, with delicious fragrance. Borne in the greatest profusion throughout the growing season. Foliage tough and leathery, deep glossy green, sun and insect proof. The youngest plants attain a height of 10 to 15 feet in a single season. Hardy and as sturdy as an oak in all localities. Splendid in the South. For single specimens, trailing over verandas, for trellises, anywhere and everywhere, this rose will give the greatest satisfaction. Strong one-year-old plants, 20c each, 3 for 50c; two-year-old plants, 75c each, 3 for \$2.00.

BANKSIAN Yellow. The flowers of this very desirable rose are pure sulphur yellow, very small, double and borne in umbels of twelve to fifteen blossoms. Spring bloomer. One-year, 20c; two-year, 60c.

Climbing American Beauty

Hardy Climbing Roses (Cont'd)

BREEZE HILL Short avid buds which develop into large, flat flowers of 50 to 60 petals, white tinted with yellow, rose and apricot shadings; flowers borne in clusters. Plant is vigorous when once established and has short, thick, dark green, glossy foliage. It is different from other hardy climbers because of its distinct color and size of blooms, which come when most climbers are passed. Price, one-year plants, 20c, 3 for 50c; two-year plants, 60c, 3 for \$1.50.

CHRISTINE WRIGHT This sister to Climbing American Beauty is an equally strong grower, and produces a great burst of large, double wild-rose-pink flowers, borne individually and in clusters, and of the most attractive quality. Occasionally additional flowers appear later in the season. The foliage is thick, leathery and almost entirely immune from attack by insects or disease. Price, one-year, 20c each, 3 for 50c; two-year, 60c each, 3 for \$1.50.

DR. W. VAN FLEET Dr. W. Van Fleet bears flowers which, when open, run four inches and over in diameter. The center is built high; petals beautifully undulated and cupped. The color is a remarkably delicate shade of flesh-pink on the outer surface, deepening to rosy-flesh in the center. The flowers are full and double, of delicate perfume; buds pointed; stems twelve to eighteen inches, and fine for cutting. The foliage is a peculiar shade of bronze green, large and glossy, with spines a bright bronze red. The variety is a vigorous grower, immune from mildew. Price, one-year-old plants, 20c each, 3 for 50c; two-year-old plants, 60c each, 3 for \$1.50.

EMILY GRAY In this we have a real yellow climbing rose as hardy as Dr. Van Fleet. The buds are long and pointed, of splendid shape; in color a beautiful light orange-yellow, changing to pale orange as they expand; they are borne on stiff stems of sufficient length for cutting; these stems are of a crimson-red color which, together

with the unusually dark green, glossy, holly-like foliage, adds a charm to the flowers and makes the plant, even when out of bloom, a most ornamental subject. Price, 30c each, 3 for 75c; two-year-old plants, 75c, 3 for \$2.00.

FREEDOM or CLIMBING WHITE AMERICAN BEAUTY

A hardy disease-resisting variety similar to Kaiserin, but of more vigorous growth and greater freedom of bloom. It is much more double than Silver Moon, with but one flower to a stem. Price, one-year, 20c each, 3 for 50c; two-year-old, 75c, 3 for \$2.00.

GLENN DALE A perfectly hardy and vigorous, but not rampant climber, with heavy dark green hybrid tea-like foliage, resistant to black spot and mildew. The lemon-colored buds are long, beautiful and uniform in shape, like a hybrid tea; borne in clusters of up to 20 flowers on laterals long enough for cutting. The flowers, which are slightly fragrant, open to cream white, and are fairly double and large and produced in one crop. Price, one-year plants, 30c, 3 for 75c; two-year, 60c, 3 for \$1.50.

MARY WALLACE Pillar rose type. Makes a fine, strong, self-supporting rose 6 to 8 feet high, with large, glossy foliage, resistant to all diseases. Blooms with great freedom in spring, and bears a considerable number of fine buds in summer and fall. Flowers well formed, semi-double, bright clear rose-pink with salmon base to the petals. Largest in size of any Wichuriana hybrid, generally exceeding 4 inches in diameter. Price, one-year, 20c each, 3 for 50c; two-year, 60c each, 3 for \$1.50.

PAUL'S SCARLET CLIMBER It is not a Rambler, but an entirely distinct hybrid, and without question the most important addition to our list of climbing roses in many years. No other rose in any class can compare with it for brilliancy of color, which is a vivid scarlet that is maintained without burning or bleaching until the petals drop. The flowers are of medium size, semi-double, very freely produced in clusters of from three to twenty flowers each on much-branched canes, the plants being literally covered with flowers from top to bottom. It is of strong climbing habit and perfectly hardy. Price, 20c each, 3 for 50c; two-year plants, 75c each, 3 for \$2.00.

SILVER MOON The flowers run four and one-half inches and over in diameter, clear silver-white in color; petals of great substance and beautifully cupped. The center is filled with bright yellow stamens, a very attractive feature. It is floriferous, the plants literally covering themselves with great Clematis-like flowers. They are borne on strong stems, twelve to eighteen inches long, and are delicately fragrant. The foliage is large and abundant, bronze green, glossy and practically immune from mildew. Price, 20c each, 3 for 50c; two-year-old plants, 60c, 3 for \$1.50.

TAUSENDSCHOEN or THOUSAND BEAUTIES A grand hardy climbing rose. A beautiful new climbing rose which has leaped into popularity by its inherent merit and beauty. The name, "Thousand Beauties," is very appropriate and refers particularly to the wonderful variety of colorings found on any one plant. The flowers are soft pink at first, but as they age the most beautiful shades of carmine-rose, cerise, blush and soft white with a gleam of light yellow, soft crimson and intermediate tints; a combination of charming coloring, which is bewildering. Price, 20c each, 3 for 50c; two-year-old plants, 60c each, 3 for \$1.50.

RUTH VESTAL A strong and vigorous grower and true everbloomer. Pure snow-white buds, and flowers are of the largest size and perfect form. Exceedingly fragrant. Price, 20c each; two-year-old plants, 75c each.

Cluster of Paul's Scarlet Climber

Polyantha Roses

POLYANTHAS are truly everblooming Roses, scarcely ever out of flower during the whole growing season. They are ordinarily dwarf, bushy plants, seldom more than 18 inches high, hardy as the Hybrid Teas, and bear small flowers in enormous, many-flowered clusters. The class is variable and many sorts do not conform to the type; some are taller, some are rather tender, and a few produce large flowers. They are especially valuable for massing, edging and to some extent for mingling with other flowers.

One-year-old plants, 20c each, \$1.50 per dozen; two-year-old plants, 60c each, \$6.00 per dozen
Except where otherwise noted.

BABY DOLL This delightful little "sweetheart" rose is an ever-blooming Polyantha. The color is absolutely new, and quite startling in its brilliancy—golden-yellow tipped with clear, bright cerise. The little buds and blooms are perfect in form, elegantly finished and borne in small panicles or singly.

CATHERINE ZEIMET (White Baby Rambler.) This is surely a beauty. It grows to a height of 15 to 20 inches and produces double, pure white flowers in wonderful abundance. It has a fragrance similar to Hyacinths. Of free, compact growth and very attractive, a sheet of white, and always in bloom.

CLOTILDE SOUPERT Known the world over as one of the very best of all bedding roses. A strong, dwarf grower and a truly wonderful bloomer, producing cluster after cluster of the finest formed flowers. Full and double, and deliciously sweet. Color effect is beautiful ivory-white, shading toward the center to silvery-rose.

ELLEN POULSEN Dark, brilliant pink; large, full, sweet-scented, vigorous bushy habit; most floriferous; very fine.

EDITH CAVELL This Baby Rambler is an ideal rose for massing, bedding or for pot culture. The flowers, which are produced in huge clusters, are bright crimson; white eye; very beautiful.

GEO. ELGER A superb Polyantha Rose with just sufficient of Tea Rose blood to make it different from any in its class. It produces great quantities of lovely little buds of golden yellow, opening into miniature symmetrical roses. Each bush is so loaded with blooms that they resemble a huge bouquet. Like all roses of this class, it is free in growth and bloom, blooming all summer. Hardy everywhere with some protection. Foliage bright, attractive green. Excellent companion for the Baby Ramblers.

GLORIA MUNDI This new dwarf Polyantha Rose has created a sensation wherever it has been shown. Honors have been showered upon it in the form of gold medals and silver cups in Europe and this country. The color is a glowing orange and does not bleach. The flowers are double, borne in clusters with rich dark green foliage. It is excellent as a cut flower and cannot be equalled for bedding. One-year plants, 35c each; two-year, 75c each.

GOLDEN SALMON A new distinctive Polyantha Rose with a brilliant golden orange-scarlet color. Free flowering; growth vigorous and bushy. Very much admired by everyone who has seen it growing at our greenhouses.

MADemoiselle CECILE BRUNNER This is the popular Baby Pink or "Sweet-heart" Rose. It makes a handsome miniature rose, coming in sprays of three to five buds. Color, blush shaded light salmon-pink.

GRUS AN AACHEN Golden-rose with shadings of red; beautifully formed, well-filled flowers; splendid for massing.

Ideal

IDEAL A striking new Baby Rambler of the usual type as to shape, size and other class characteristics; but notable in its phenomenal quantity of bloom, and in the richness of its color. Ideal is darker than the others, its distinctive color shade being a rich garnet red. Ideal indeed for edging or for making a brilliant bed of rich, lustrous garnet, blooming continuously all summer and until frost. The flowers are semi-double, come in great heads of thirty or more, and the color is retained remarkably well until they drop. A neat and compact grower. Has everything a Polyantha of this type needs.

LAFAYETTE An entirely new break in the Baby Rambler type, with brilliant cherry-crimson flowers as large as Paul's Scarlet Climber; produced in immense branched trusses (we counted over forty flowers on one branch), free and continuous blooming; a splendid rose either when planted as a single specimen or massed in quantity.

A Garden of Vestal Roses

How to Grow Roses

WHERE TO PLANT. The average home grounds can usually furnish several available spaces for rose beds. Choose a place where the sun will shine for at least one-half the day, and, if possible, facing to the South or Southeast. Avoid planting too close to trees or hedges as they take the nourishment away from the roses. Select a well drained place, both surface and underground; roses do not like wet feet. Try to combine in your location as many of these conditions as possible, because, while no point is absolute, all are important; but don't give up the prospect of growing roses for the lack of some one of them. If you are earnest in your endeavor you can soon provide the essentials.

SOILS. Any soil that will grow vegetables or other crops will grow roses, but they like a rather stiff, clay soil that is at the same time porous. They will also grow in sandy soils to which a portion of clay loam has been added; and likewise, if the soil is too heavy, a little sand may be mixed with it for better drainage. Some soils are too acid for best results for roses and need an application of ground limestone. The application of lime will benefit most soils but will not harm any. Apply at the rate of one pound per square yard of surface. If hydrated lime is used, apply only half as much.

PREPARING THE SOIL. Having selected the location and decided upon the size and shape of your beds, you are ready to prepare the soil. The results you obtain in growing roses will depend to a great extent on the thoroughness of this operation. Eighteen inches is not too deep to spade or fork the soil, as the roots of roses often extend even deeper than this in their search for food and moisture. After the soil has been worked up,

level with a rake, at the same time pulverizing the soil as much as possible to make all the plant food available.

FERTILIZER. Closely related to the preparation of the soil is the proper kind of fertilizer to use. Much has been said for and against barn yard manures, but no fertilizer has been found that will give better results in growing roses than half rotted cow manure; and especially when the rose beds are first prepared. A three-inch layer spread on the top of the bed and thoroughly mixed with the soil will give wonderful results. If barn-yard manure is not available, any other good commercial fertilizer is the next best. Apply at the rate of two ounces for every plant to be planted. Ground bone meal may be worked in at the time the roses are set or applied any time thereafter. It is slow acting, from which you get results for several months and years afterwards. One pound may be applied to every square yard of bed surface. If possible, all fertilizers, except those used in after years as a food, should be applied several weeks before the roses are planted. Roses require liberal applications of fertilizers, and it is not often that too much manures are used. However, when manures have been applied for a long number of years to the same beds, there is danger of the soil becoming too light, and firing or burning of the roses results.

TIME TO PLANT. This depends on the section of the country in which you live. With us in the South and Southwest, roses may be planted any time from the first of October until the first of June, excepting those periods during the colder winter months when the ground is frozen. Pot-grown roses may be planted at any time of the year if water is available to firmly establish them in the ground and allow the new roots

to take hold. Autumn and early spring planting of roses, however, is preferred because the roots get established before hot weather.

TREATMENT ON ARRIVAL. As soon as you receive the package from the express office or postman, unpack at once and place in a shady place. Do not unwrap the roots until ready to plant. Do not expose roots to the sun or wind. If unable to plant the roses as soon as they arrive, "heel them in" in the garden until you are ready to plant them. If "heeled in," press the soil cover firmly around the roots to keep down evaporation.

PLANTING. Planting roses is not a serious or complicated job; on the other hand, it is amazingly easy. When ready to plant, remember again that the roots must be kept from the wind and sun. The best plan is to keep the roots covered with a damp piece of burlap or of other packing material. Unwrap each plant just before placing it in the ground. The size of the rose bed may be any width, length, or shape as desired, but in planting the roses allow two and one-half to three feet apart each way for each rose bush. This allows plenty of room for proper development. If only a single row is planted, they may be set two feet apart in the row and still have plenty of room. Make the holes in the bed plenty big enough to accommodate the roots in a natural and uncramped position, neither too deep nor too shallow (see illustration). If pot-grown roses are being planted, set about one inch deeper than the surface of the pot and do not break the ball of earth that holds the roots. Settle well pulverized soil in around the roots, so as to fill up every air space, and so that every single root will be entirely enclosed in soil. When the hole is half filled, and roots covered, press the soil down firmly with the hands; then fill the hole with water and let it drain away; fill in level with soil, and tamp it carefully but firmly, then give a final covering of soil, which should be about level with the surrounding turf, but not high enough to let the water run away when it rains.

CULTIVATION AND WATERING. As a general rule, Mother Nature attends to her job of watering the trees and plants, but weather conditions vary and roses need plenty of water as well as sunshine, so it is well to aid Mother Nature by man-made methods, and when dry weather comes, resort to artificial watering. Make a good job of watering your plants. Don't just soak the surface of the ground for an inch or two. Soak the dirt well all the way down below the roots. Late afternoon is the best time to water as evaporation is not so great as it is during the hotter part of the day. As soon as the surface of the bed has dried out enough to allow cultivation, scratch the entire surface about an inch deep and leave in a finely pulverized condition. Frequent cultivations are more beneficial than watering every day. Cultivate at least once a week and oftener if possible, and always as soon after watering or a rain as the soil is in a condition for cultivation. Keep all weeds and grass out of the rose beds and do not plant other flowers in the same bed with roses.

MULCHING. This serves to retain the moisture and also to preserve a suitable temperature. A dust mulch is maintained by frequent hoeing and is perhaps the best method, although during the hot months a straw cow or horse stable manure, that will not heat, is very beneficial. Heat moss may be applied three or four inches all over the rose beds during the summer months. It keeps the soil cooler and stops weed growth. This may be removed in the fall to be followed by a mulch of manure for winter protection and an early spring feed.

WINTER PROTECTION. In the South and Southwest it is not necessary to give roses any winter protection other than a straw mulch. Farther North, however, the tender varieties should be mounded up from 8 to 12 inches with soil around the base of the plants and the tops wrapped with straw and burlap. This is only recommended in sections where the weather is below zero and remains at this temperature for a long period. In warm sections, if the plants are wrapped the covering should be removed as soon as the cold spell is over. If allowed to be covered too long the tops of the plants rot.

PRUNING. A good rule to follow with pruning bush roses is to cut out all dead wood at any time of the year that it is noticed. Uneven growth may also be pruned back at any time of the year without injury. The main pruning in the spring may be done in January, February, or March, depending on the section. With a hand-saw and pruning shears, remove all dead wood and other wood that has lost its usefulness to the main plant. Care should be used to keep the plants as symmetrical

Method of Pruning Hybrid Teas for Garden Display

as possible, at the same time removing all the dead, weak, over-crowded and otherwise useless shoots. New plants should be cut back to within six inches of the ground, and older plants one-half to two-thirds of the previous season's growth. By thinning out the shoots, more strength is left for the main stalks. If budded or grafted roses have been planted, the gardener should keep a sharp lookout for ground suckers and cut them off before they have time to draw much sap strength from the main root system. In the pruning out of shoots they may be entirely cut away to the base of the plant, or to its starting point on the older shoot, from which it springs. When the plant has been pruned, the shoots should be left as nearly as possible as equal distance from each other, so that the plant presents a well-balanced appearance at all times. Climbing Roses should only be pruned immediately after their blooming period. At this time cut out all dead parts and remove

most of the growth that is over two years old. Climbing roses bloom freest on second year growth. Tip back all the present season's growth at least one-third to one-half. The lateral shoots that come from these canes will give the best blossoms next season. Tipping back the long canes on everblooming climbing roses causes them to bloom more during the summer and fall.

OWN ROOT ROSES vs. GRAFTED OR BUDDED ROSES. Every rose-grower should learn the difference. In a budded or grafted rose, the top of a good flowering variety has to be joined and made to grow onto the root of a wild rose. An own root rose never borrowed roots. It stands on its own feet, so that, if the top be winter killed the new growth from the root will bloom true as at first. Not so with the budded or grafted rose. If the top be killed, the wild root is worthless; throw it out.

As a general rule, for application over a broad area, the experience of many people in many different localities indicates a preference for own root roses in as many varieties as will make satisfactory and vigorous growth. Some varieties, however, when grown on their own roots, are not thrifty and vigorous. Such kinds should be obtained in plants that have been budded or grafted onto the roots of a strong growing rose in order to obtain the desired growth and abundant bloom.

The Way to Prune and Thin Out Climbing Roses

When planting own root roses, set in the soil an inch deeper than the stain of the soil on the stem indicates it grew before. When planting budded or grafted roses, set with the joint or union of top and root one inch below the surface of the soil, and watch for suckers. If there

appears any growth origination below the union, dig away the soil and cut it off close up to the stem; otherwise it may grow up and crowd out the flower-bearing part of the plant. With few exceptions, Vestal's Roses are all grown on their own roots.

Cultural Directions for Growing Large Flowering Chrysanthemums

WHEN TO PLANT. This depends on the section, but usually any time that the ground can be worked from the first of March up to the first of July.

SOIL. Any soil that will grow other flowers or crops will grow chrysanthemums, preferably a sandy clay loam with a mixture of well-rotted cow manure.

FEEDING. Chrysanthemums are gross feeders but there is no set rule for the amount of fertilizer to use, as this will depend on the richness of the soil in the beginning. Liquid manure water may be applied every three weeks during the growing season up to the time the buds show color. Do not fertilize after the flowers are opening.

TRAINING. A strong outdoor plant can support four strong shoots and produce large blossoms. When the plants are 8 inches high pinch out the tops, and after the new shoots appear select the four strongest to produce the blossoms. Remove all the rest of the shoots except these four. When the shoots have grown enough to need staking, tie them to a stake, but not too tight.

Every 5 or 6 days the plants should be examined, and with the thumb and forefinger remove all the lateral buds that come out at the axil of the leaves, but always leave the main terminal bud undisturbed (see illustration). The object of removing the lateral shoots is to concentrate the whole energy of the plant and thereby increase the size of the flower. In case the main shoot gets broken off, select the next strongest lateral bud just below and carry on as before.

Sometimes chrysanthemum plants that are propagated in the greenhouse early in the Winter, before the plants have had a sufficient rest, will form flower buds in early Spring and Summer. These will in no way effect the blooming qualities of the plants in the Fall. Remove these immature flower buds as soon as noticed, and if they persist in forming, keep on removing them by pinching out the tops until a strong growth shoot appears for the lower part of the plant.

ENEMIES. Green and Black Aphids are the most destructive insect pests, but one or two applications of Nicotine Sulphate applied at the rate of one teaspoonful to a quart of water and sprayed on the plants will completely destroy these insects.

Chrysanthemums are next to Roses in importance. In the South they can be grown any way—in pots or in the yard. They bloom after all other flowers have gone. Our collection embraces the most complete varieties anywhere and are especially selected for this particular section.

BETSY ROSS. This is one of the largest white chrysanthemums on exhibition at fall shows. Flowers of fine form. A pure snow white, a good strong grower; in all, a unique and beautiful variety.

CHIEFTAIN. A beautiful incurving pink of perfect shape. Perhaps the finest incurved pink commercial variety in cultivation today.

ENCHANTRESS. The color is bright rose-pink, of a very even shade.

JOSEPHINE FOLEY. The best white introduced in recent years. Purest white, strong in growth and stem. Early mid-season.

MARIGOLD. A monster yellow; flower unsurpassed both in size and color in its season.

OCTOBER HERALD. An intense yellow with perfect stem and foliage. Shows a bronzy tint from late buds. Easy to manage.

OCTOBER QUEEN. Snowy white, with incurving center and horizontal outer petals. Very promising as an early.

RICHMOND. A new golden yellow; noticeable for its long blooming season, fine form, perfect fullness and silky finish.

ROSE PERFECTION. An early Chieftain, blooming two weeks earlier than that fine pink variety.

SILVER SHEEN. White; fine large blooms on very strong stems; largely grown for its period, which is early mid-season.

YELLOW TOUSET. A brilliant yellow; wonderful in form, with a strong stem. A good keeper and shipper; in fact, one of the best commercial yellow varieties on the market.

WHITE CHIEFTAIN. We are sure that this will prove an ideal white. Like its parent, it holds in fine condition for a long time.

Frequent cultivation is the secret of moisture conservation. When watering becomes a necessity, do not water every day. Water at intervals of once a week or ten days. A thorough soaking twice a week is far more beneficial than a daily sprinkling of the top soil.

Summer Bedding Plants

"Brighten up your lawn and garden. Have beautiful cut flowers for table and yard decorations. Showy foliage plants for beds. Pot plants. Baskets and porch boxes for the porch." Nowhere else in the United States can you enjoy the many beautiful flowers and plants as right here in the South. Plant more of them this year than ever before. Make your back yard a mass of blossoms all through Summer and Fall. You can easily do this by planting Vestal's Full-of-Life pot-grown plants.

QUEEN'S WREATH

ANTIGONON LEPTOPUS (Coral Vine.) (Mexican Rose.) A beautiful climbing plant with tuberous roots; blooms freely from June until fall. Beautiful rosy-pink flowers produced in large racemes. Leaves heart-shaped. A most desirable vine for the South. In this section tops die down in winter; it is, therefore, advisable to protect the roots with a mulching of leaves. Vine does not begin growth until April. Strong two-year roots that will bloom the first year, 35c each, 3 for \$1.00.

ASPIDISTRA

An attractive, large-leaved plant, especially suited for dark halls and rooms, thriving with little light or attention. Especially hardy in the lower South and fine for low foundation work against brick terraces. Plants with 3 or 4 leaves, 50c each.

ACALPHAS

FIRE DRAGON (Acalpha Tri-color.) A most wonderful plant, surpassing the finest Coleus or Begonia in the rich color of the leaves, which are rich and beautiful. Mottled and blotched with crimson and scarlet on a green background. Foliage extra large and maintains its marking regardless of summer heat. Its most important feature is its wonderful qualification for bedding, as it will stand bedding out like Coleus; in fact, in the sunniest place it produces the highest coloring. Price, 10c each, 3 for 25c.

ACHRYANTHUS

Ranks with Coleus as a bedder, but more hardy. Retains its brilliant coloring all the season. Price, 10c each, 12 for 75c.

BRILLIANTISSIMA. Leaves and stems of a beautiful ruby red. Splendid for bedding.

McNALLY. Golden yellow, veined green.

EMERSONII. Leaves of glittering garnet, reverse side purple wine colored; veins and stems carmine.

ALOYSIA CITRIODORA

LEMON VERBENA The delicate fragrance of its leaves renders it indispensable in making bouquets. Price, 15c each, 3 for 40c.

AGERATUM

Useful in all summer bedding schemes, as well as for baskets and vases. In fact, they are indispensable for these purposes on account of the serious lack of blue shades among bedding plants. They appear to greatest value as an edging or massed in liberal quantities. Price, 10c each, 75c per dozen.

ANTHERICUM

COSMOSUM A pretty variegated plant well adapted for use in hanging baskets, or as an edging for porch or window boxes, with graceful 4 to 6-inch long deep green foliage with a band of creamy yellow through the center. Price, 20c each, 3 for 50c.

ALTERNANTHERAS

OR DWARF COLEUS

Price, 10c each; 60c per dozen; \$4.00 per 100

AUREA NANA It is admirably adapted for ribbon lines, carpet bedding, or massing front lines in foliage beds. It is of compact growth. Color of foliage, bright golden yellow.

BRILLIANTISSIMA Crimson scarlet and pink. Its gorgeous color gives it the name of "Rainbow Plant."

PARYONCHOIODES MAJOR It is the Alternanthera so largely used in all ornamental carpet gardening. It grows only about six inches high, and can be kept much shorter by shearing it. The color is as bright when first planted as at any other time, and this is kept constantly. The color is brightest carmine.

Vestal's Gorgeous Bedding Coleus

The Coleus, a plant very familiar to all, is one which, for bedding purposes, can not be excelled. The foliage is very beautiful in many of the good newer sorts, and shows a great variety of markings and fine combinations. It is used in great quantities in private places, in small gardens and in the public gardens and parks. The Coleus is used to best advantage in planting in ribbons of color in the borders along drives, in beds of various shapes, such as stars, crescents, triangles, circles and squares, as the foliage, being of such various colors, can be used with striking effect. Light colors against dark, with borders of contrasting color, which are easily obtained among the yellow, red, striped, mottled brown, blue-black, plum and other colored sorts, secure effects when used on a fine lawn or in the border, hard to make with other plants.

Vestal's Gorgeous Bedding Coleus—Price, 10c each; 75c doz.; 100 for \$5.00.

NOVELTY COLEUS

NEW GIANT COLEUS Christmas Gem. (Brilliancy, or Dr. Ross.) Leaves immense, 8 to 12 inches long. Looks like a Rex Begonia, and just as beautiful. Cannot be excelled as a pot plant. The name aptly describes the appearance of this variety, which belongs to the giant-leaved section; of strong, vigorous habit, growing from two to three feet high, with leaves often nine to ten inches long, which are of bright carmine, shadowing off to a deep maroon, the margin being yellow and green, the whole leaf having a rich velvety luster. Price, 15c each, 3 for 40c.

C. W. SCHMIDT Improved Setting Sun; center crimson-velvet, edged and spotted gold; very fine for potting in 4 and 5-inch pots; finest offered in the Coleus line. Price, 15c each, 3 for 40c.

GOLDEN GEM Sport from Christmas Gem. Has same character, except the leaves are a bright yellow. Price, 15 cents each; 3 for 40 cents.

Price, 15c each, 3 for 40c.

NEW HARDING COLEUS Harding Coleus, most beautiful, bright red leaves with brown, green-yellow edging. A capricious beauty, varying in expression with each day's development. The tiny clusters of new leaves are bright green with a cheerful carmine segment; the older leaves show a russet background broken up with cream and pink; while

Coleus C. W. Schmidt

others frame a dappled wedge of crimson and maroon, with the most brilliant shades of clear green. Price, 20c each, 3 for 50c.

TRAILING QUEEN A center wedge of creamy pink to crimson, finely scalloped edges. The plant is half trailing or running and is well adapted for window boxes, baskets or vases. Price, 10c each; per dozen, 75c.

THE COMET PLANT

ACALYPHA SANDERII Leaves are dark green, from the axle of each of which springs a long, drooping spike of glowing crimson-scarlet, nearly an inch in diameter and from 18 to 24 inches long, very velvety in texture, reminding one of a long piece of brilliant chenille. Exceedingly curious and interesting novelty; unlike any decorative plant. Bound to have a large sale on account of its oddity and rarity. Price, 30c each, 3 for 80c.

CARNATIONS

Blooming plants value for the inspiring spiciness of their perfume, the perfection of their flower form, fine cutting lengths of stem, freedom, and long keeping. Carnation plants should be repotted whenever there is indication of their becoming pot-bound. Transplanted into the garden after all danger of frost is over, and given at least 12 inches of space, with good soil and cultivation, these plants should furnish abundant bloom from July until late Fall or may be kept "pinched back" to retard bloom, potted up at approach of frost and brought inside for winter blooming.

CHRISTMAS CHEER New. Color is a brilliant glowing Poinsettia scarlet. Easier to grow than a Geranium, and will produce fifty or more blooms in a season. Price, 15c each, 2 for 25c.

The Comet Plant

Mammoth-leaved Rex Begonias are Ideal Box Plants for Shady Porches

Vestal's Choicest Flowering Begonias

REX BEGONIA The Rex division of the Begonia family has been a great favorite. In no other class of plants do we find the rich metallic foliage, lustre and various colors so satisfactorily blended as here. We find colors of bright green, silver colored, reddish bronze, as well as varieties of bright rosy plum color. The plants are grown exclusively for the great beauty of their foliage, as they make unexcelled pot plants. The Rex Begonia dislikes our dry atmosphere and bright sunshine, and thrives best in a rather shady and moist situation. The soil should be as near as possible of the nature of a mixture of loam, sharp sand, and well rotted cow manure. The soil should be light and porous. Price of Rex Begonia, good, strong established plants, 35c each; 3 different varieties for \$1.00.

ARGENTEA GUTTATA It has purple-bronze leaves, oblong, in shape, with silvery markings, and is in every way a most beautiful Begonia. Produces white flowers in bunches on ends of growth stems. 20c each, 3 for 50c.

ALBA PICTA ROSEA This is a seedling of the Alba Picta crossed with Rubra. Foliage rich green, spotted with white; flowers on long, pendant stems, similar to Rubra. Color, delicate rose; very free flowering. 20c each, 3 for 50c.

BEEFSTEAK BEGONIA Sometimes called the "Strawberry Leaf" Geranium; very ornamental; leaves silver top, red underneath; very pretty flowers. Each, 20c, 3 for 50c.

BRILLIANT New Everblooming Flowering Begonia. Freest blooming variety known; of easy culture, low bushy habit, and literally covered the entire year with a wealth of beautiful Christmas red flowers with yellow stamens. It well merits the name of Everblooming Begonia. Price, 20c each, 3 for 50c.

CAROLINE LUCERNE A superb new variety of the Coral Begonia, producing gigantic trusses of bronzy-red flowers and flowering continuously from April to November. The foliage is dotted with silvery white. Blooms last from a month to six weeks, and are borne in immense clusters, almost hiding the plant. The color is bright coral-red, changing to a delicate pink. Nice plants, 30c each, 3 for 75c.

MARGUERITE Leaves a bronzy green, somewhat resembling Metalica, but giving a more bushy form. Light rose colored flowers. 20c each, 3 for 50c.

M. DE LESSEPPS It is beautifully spotted with silver. A very strong, free-growing variety that will succeed with ordinary care. White flowers. 20c each, 3 for 50c.

RED RUBRA This Begonia is still a great favorite. The flowers are a rich coral red, hanging in large pendant clusters; these, combined with the rich green foliage, make it one of the best plants for house culture. 20c each, 3 for 50c.

PINK RUBRA We doubt if there is a pink flowered variety that equals it. The foliage resembles Rubra in shape, but is a lighter green, while the flower panicles are much handsomer. It is a pure pink flowering Begonia. 20c each, 3 for 50c.

THURSTONII A distinct and pretty shrubby variety, with thick, heavy foliage, which is of a rich metallic green above and bright red underneath; the flowers are a fine pink, rising well above foliage, 20c each, 3 for 50c.

The Beefsteak Begonia

ARTILLERY PLANT

PILEA ARBOREA A pretty little plant of drooping, graceful habit and fern-like foliage, literally covered with small, pretty flowers, giving the plants a pleasing effect; fine for basket or pot plants. Price, 10c each, 3 for 25c.

BOUGAINVILLEA

CRIMSON LAKE This is one of the most notable vining plant introductions of years. Its numerous clustered, crinkly, paper-like bells in their emerald setting are an incomparable brilliant crimson-lake color. Their foliage is attractive in form, and shiny; the entire effect of leaf, twigg growth and luxuriant bloom giving them an air of tropic elegance unequaled by any other indoor vine. Their bright festoons are wonderfully effective along the walls in conservatories and sunrooms, or when trained on wire trellis forms, they can be kept down to dwarf, compact formation for use in tubs or large crocks. Price, one-year plants, 25c each; large plants, 50c.

SANDERIANA Large bell-shaped flowers of lilac-rose, borne profusely in terminal clusters all over the plant; blooms when quite small. 20c each, 3 for 50c.

CROTONS

Nothing can excel the beauty and richness of coloring that is found in this class of plants. They are beautiful as pot plants for the conservatory, making handsome specimens for decorative and exhibition purposes. In the latitude of Little Rock and southward they are wonderfully effective for summer bedding, presenting a glorious medley of rich variegated colors not found in any other class of plants. Three-inch pot plants, 40c, 3 for \$1.

BRUGMANSIA

ANGEL'S TRUMPET It grows easily, blooms freely and the flower is something to be proud of. The Brugmansia blooms indoors in winter and in the garden in summer. The plant has large tropical leaves, with blooms eight inches wide at the mouth, resembling a trumpet, hence the name, "Angel's Trumpet." Pure white in color and as fragrant as a Jasmine. Extra strong plants, 35c each, 3 for \$1.00.

Christmas or Lobster Cactus

GIANT WHITE MOON FLOWER

A decided improvement over the old variety Ipomea Grandiflora. The flowers are more than twice the size of the old variety and are produced in such wonderful profusion that they completely cover the vine with a veil of glistening white. Price, large growing plants, 10c each, 3 for 25c.

Brugmansia or Angel's Trumpet

Begonia Brilliant

New Ever-Blooming Pelargonium

EASTER GREETING

The flowers of Easter Greeting have the large size and the gorgeously rich coloring of the "Lady Washington Geranium." To this is added, in Easter Greeting, the habit of continuous blooming, which has made the ordinary bedding geranium so highly valued. Easter Greeting is the first of a new race and one of the most valuable introductions in recent years. As an Easter plant it rivals the Azalea; but unlike the Azalea, Easter Greeting will remain in full bloom all summer. Price, 25c each, 3 for 65c.

New French Hydrangeas

French Hydrangeas
Try a few along the base of your porch.

When given a rich, moist soil, where they are protected from the afternoon sun of summer, and the plants kept well enriched, there is nothing more attractive than a mass of well-developed specimen Hydrangeas. They are also very desirable when grown singly or in tubs. Several varieties vary in color from pale rose to blue. This variation is due to certain chemicals contained in the soil.

SPECIAL NOTE—Blue is a color that is not fixed in Hydrangeas. It is controlled sometimes by climatic, and other times by soil conditions. To make these Hydrangeas bloom blue, incorporate one-half pound of alum, broken into pieces about the size of a hickory-nut, with each bushel of soil.

Brazilian Plume Plant

PINK BRAZILIAN PLUME PLANT

(*Justicia Carneae*.) This plant is a native of Brazil and of the easiest possible culture, and seems to do equally well in all kinds of soil, and in any situation, requiring very little attention; it is, in fact, one of the few plants that everyone can grow successfully. It is a strong, rapid grower, and throws long shoots, each of which is tipped with the beautiful pink plume-like flowers, the ends of every petal drooping in a most charming manner. This new sort begins to bloom when the plant has only three or four leaves and is never out of flower afterward. If pinched back occasionally it makes a very dwarf stocky plant, frequently covered with 20 to 50 large pink flower-heads, lasting a long time. The foliage is also more persistent and highly ornamental, being heavy in texture and very velvety. Price 20c each, 3 for 50c.

HOW TO BUILD A POOL

Every home may possess a back yard lily pool—even the rented house. For a simple, beautiful pool may be built of a barrel or a tub. A plain wash tub painted blue inside and sunk to its rim in the soil; half a barrel, a wooden lard tub—all these can be used. A particularly beautiful pool may be really a group of pools, made from three or four sunken tubs, with moisture-loving plants placed in between. But if a "regular pool" is desired—one built of cement—proceed in this manner: Select a sunny spot. Excavate a bowl-like depression to a depth of two and one-half feet, leaving sides at a 45 degree angle. Line the sides and bottom with heavy wide mesh fence wire, supporting it two inches from the ground. Make a cement mixture of one part cement, two parts sand, and three parts gravel. Pour a three-inch layer of this mixture, covering sides and bottom and enclosing wire reinforcing. Put on another three-inch coat immediately and smooth. Let set a few hours; then put on a quarter-inch coat, consisting of one part sand and one part cement gauged with water; trowel down. Keep wet for three days. While the concrete is still moist, add a coping of stone, brick or concrete. On the fourth day, the pool may be planted. The plants may either be placed directly in soil on the bottom of the pool or planted in boxes. If soil is put on the bottom of the pool, let it be at least a foot deep, covered with one inch of clean sand. One-third well-rotted manure and two-thirds rich loam is a good mixture. Plant the lily roots so that the crown is even with the top of the soil. Do not bury the crown. Place at least eight inches of water in the pool above the soil surface.

HOW TO PLANT WATER LILIES

For most pools lilies may be planted in boxes 2 feet square, as shown in diagram. For best results, plant only one lily to each box. Shallow water plants may be set in the same box with lilies to the advantage of both.

The best soil to use is a mixture of three parts good garden soil and one part well-rotted cow manure. Bone meal may also be mixed with the soil, and this is a good fertilizer to feed plants that appear starved out.

Water lilies should be set with the crown of the plant just even with the surface of the soil, which is then covered with one inch of sand to keep the water clean. Allow from 3 to 5 feet between lilies in the pool for proper development.

Eight to twelve inches of water above the crown is best for the production of blossoms. Full sunlight is necessary for the best growth and formation of the blossoms.

Hardy water lilies in the South can be planted any time after the first of February, whenever the weather is not freezing. Tropical lilies should not be planted until all danger of freezing is past. In our section this is usually about the middle of March.

Lily of the Valley

Lily Speciosum Magnificum

Large Double Flowering Peonies

Peonies will grow anywhere—reasonably speaking. They thrive in partial shade, but best results are obtained when they are planted in deep, rich soil about 2 inches below the surface and have a sunny location. Plenty of water during the growing season is an added stimulus, and if liquid manure is applied at intervals of ten days, the grower will be amply repaid for his trouble in the increased size and coloring of the flowers. When placing manure around the plants, care should be taken not to put any on the stems, as this will sometimes cause the plants to cease blooming.

Rock Gardens

The New Vogue in Gardening

HOW TO MAKE A ROCK GARDEN

Everybody is making rock gardens these days. Even on the small lot there is some place where a tiny rock garden may be tucked away. The compactness of a rock garden is one of its charms. There is no end to the interesting combinations of rocks and plants. Pygmy mountains, Lilliputian valleys can be built of rugged rocks; a trickle of water pretend a mountain torrent, losing itself in a mirrow pool.

LOCATION. A spot in full light and air, away from shade trees, is best. Any slope, too, can be used. Transforming into a rock garden is often the happiest treatment for a slope. Take advantage of any outcrop of natural rock about your grounds.

PLANNING. Make your rock garden a reproduction of nature in miniature. Strive for natural surroundings for rock-loving plants. While there is charm in unusual layouts, orderly arrangements of rocks and planting are most pleasing. Your rock garden may be just a wall, or large enough for ridges, valleys and even bogs. Picture the finished form before starting construction. The plan may be anything fancy dictates, but when possible it should have steps and paths about it. Irregular paths are most interesting, with walks following the valleys.

ROCKS. The best rocks to use are those between the round and boulder type and the flat or flagstone type. Save the latter for walks and steps. Rocks should not all be of the same size; a few large ones add effectiveness. Too many small stones make the effect spotty and unnatural.

SOILS. Usually a prepared soil of equal parts: (1) vegetable fiber; (2) garden loam, free from clay; and (3) sharp, coarse sand is best. Vegetable fiber may be leaf mold, old sod, or turf from the woods if well decayed. In cities it is easy to procure prepared peat fibers. Barnyard manure is too rich and heavy for rock plants.

CONSTRUCTION. Have soil prepared in advance. Excavate or grade existing soil to proper contour. Then lay the rocks, lower ones first. Choose and place rocks so that there is more plant surface than rock in the finished effect. Place them as naturally as possible; long rocks nearly horizontal and parallel to face of the slope. As each rock is laid, ram the soil back, around and beneath it; use no cement. Four factors in the success of rock work are—(1) Place each stone so it is anchored firmly. Stones above help hold those below. (2) Slope horizontal crevices downward into

bank. (3) Rocks up-tilted let rain run down into crevice; tilt back 10 degrees to 45 degrees or more. (4) In walls, set each high rock back of the lower, giving the face of the wall a back-slope, thus giving plants water, air, light and room. Consider direction of ground drainage and lay stones across valleys to prevent soil washing away.

PLANTING. Plant rock plants in the spring. Planting in crevices is best done during construction, but most planting can be done any time after construction. In rock planting the point is to spread roots out, firmly in contact with soil. Some watering may be needed until plants become established. Keep out all weeds.

CHOICE OF PLANTS. To help you choose dependable plants, we list from our stock of hardy perennials those best for rock planting. In making your choice and planting consider height, color, and adaptability of the various plants. Tufted plants, with rosetted foliage and short flower stalk above, such as the Heuchera and Strawberry Geranium (*Saxifraga*) are best suited for small crevices. Erect, bushy plants such as Aster Mauve Cushion, Saponaria and Sedums are good for flat areas, above creeping sorts. Let drooping plants hang down over face of the rock; they are best near top of the slope. Drooping plants, too, are fine for foliage bulk, for luxuriance, and covering banks. A few of the best drooping types are Alyssum Saxatile, Phlox Subulata, Iberis Sampervirens and Campanula Carpatica.

For creeping plants to form mats on ground and outlining walks, use Veronica Rupestris, various Sedums, and Thyme.

For large rock gardens, dwarf forms of the evergreens, such as the Prostrate Juniper, Cotoneaster Horizontalis and others will make picturesque backgrounds.

Almost all of the smaller flowering shrubs are both suitable and desirable in building up the background or in establishing height at places where needed.

ALLIUM Low-growing bulbous plant, with grass-like leaves. The flowers are borne in globular heads during June and July. The color is a beautiful shade of mauve lilac. Grows in a sunny place. Plant 5 or 6 inches apart. Excellent for rock gardens. 20c each, 3 for 50c.

Attractive dwarf plants that will succeed in any soil, forming evergreen tufts of bright green foliage, from which innumerable flowers appear in dense heads, on stiff, wiry stems, from 9 to 12 inches high. They flower more or less continuously from early spring until late in the fall. Very useful in the rockery and border edgings. 20c each.

WEIRGREENS

Evergreens Give All Year Beauty

In summer and winter Evergreens bring to our homes the freshness of the woods and mountains. Surely you have at some time called at a home where Evergreens greeted you at the doorstep—where a warm welcome was instantly felt even before the door was opened. For Evergreens are like that—in summer or winter their lovely green foliage is always appealing. When planted about the foundation, Evergreens dispel the coldness of the bare building; they destroy the bleakness of winter and substitute a protective warmth to which everyone responds.

Vestal's Evergreens are grown especially for your garden and home, and all kinds are acclimated and tested before sending them to you. This method of growing assures you of high quality plants, full of life and sturdiness. Vestal's Evergreens may be planted at any time of the year with perfect safety because every one is lifted with ball of soil on the roots, and there is no chance of the roots becoming dried out. Study the varieties offered on the next 14 pages and select the kinds best suited to your particular type of house.

for Permanence

When you plant a garden some of the flowers selected are only for a season, to be replanted or replaced next year. Not so with Evergreens and Shrubs. Select with care those that you want. Study your home, and plant suitable shrubs.

SELECT AND PLANT SHRUBS AND EVERGREENS for Color, Height, Foundation Planting, Background for Unsightly Walls, etc., or for Urns

In selecting your shrubs bear in mind that some are dwarf plants, while others grow to a great height. Some are always green (and there are many shades of green). Too, some turn crimson, golden, etc., in Fall. Note these characteristics when ordering. Study your home and order shrubs you think will add charm to it.

Just a picture of how a desolate, uninviting place may be transformed into a cottage of beauty, by planting.

ABELIA

ABELIA GRANDIFLORA One of our most beautiful, popular and satisfactory broad-leaved Evergreens. The graceful, drooping stems and branches are covered with dark glossy leaves which in winter assume a metallic sheen. From the middle of May until frost this plant produces an immense quantity of tubular-shaped white flowers about an inch long which are borne in clusters. During the growing season it is advisable to pinch off the ends of the long shoots. This will make the plant dense and compact. For single specimens, for groups, or for a hedge we cannot too strongly recommend this plant. Two-year plants, 18 to 24 inches, 50c each, \$5.00 per dozen; three-year plants, 24 to 36 inches, 75c each, \$7.50 per dozen.

Southern States Evergreen Lawn Grass Seed For the convenience of those of our customers who object to the Bermuda Grass, we have decided to offer them this year Southern States Evergreen Lawn Grass Mixture. A mixture of the best grasses that exist for general planting in the Southern States. Most lawn grass mixtures are of little use in the South, as they burn out in dry summers.

Vestal's Evergreen Lawn Grass Seed is a well balanced scientific blending of the best American grasses which will flourish under varied and adverse conditions of soil and are by nature adapted to hot, dry climates. It quickly produces a firm, deep velvety and elastic turf and holds its beautiful emerald-green color throughout the season.

By using Vestal's Evergreen Lawn Grass Seed and with some care and attention to watering, an all-the-year-round lawn can be maintained in the Southern States where lawns generally do not thrive. For a plat 15x20 feet, or 300 square feet, use one quart. Price, delivered free, 60c per quart; \$1.50 for three quarts; \$2.50 for six quarts.

PRIVET (Hedges)

AMOR RIVER PRIVET For the South it is far superior to all other privets, as the Amoor River Privet retains its foliage throughout the entire year. It is without doubt the most popular evergreen hedge plant of the day. It is of rapid growth, adapts itself to almost any soil not too arid or extremely wet. If properly treated, a hedge may be secured in two years after planting. Bushy plants, 15-18 inches, \$1.00 for 12, \$6.00 for 100; 24-36 inches, \$1.50 for 12, \$8.00 for 100.

CALIFORNIA PRIVET Remarkable for the beauty of its foliage and strong, regular symmetrical growth. The foliage is a dark green, very glossy and wax-like; hardy everywhere. It drops its foliage during January and February. 2 to 3 feet, \$1.00 per dozen, \$6.00 per 100.

HOW TO MAKE A PRIVET HEDGE

Prepare the ground by plowing or spading to the proper width and depth. Open the trench 12 inches wide by 15 deep. Apply to this a liberal amount of well-rotted stable manure, and if this is not available, bone meal or some high-grade fertilizer. Mix the manure or fertilizer thoroughly with the soil. Set the plants in a straight line in the trench one foot apart, about one inch deeper than they originally stood in the nursery row. Firm the earth well about the roots, level off, and then cut the plants back to within four inches of the ground. In the spring, after the plants have made a growth of six or eight inches, cut off one-half of this growth, both sides and top, and proceed in a like manner with each succeeding growth until your hedge has reached the desired height and width. Cultivate well.

MONTMORENCY Red, rich, acid, very hardy and productive.

THE NEW YOUNGBERRY

A remarkable new berry which we firmly believe is by far the most promising of all the new things. The berries are about an inch long, dark purple color with a delicious flavor. The plants are very productive and begin bearing the first year after planting. Another characteristic of the Youngberry is its adaptability to all and any kind of soil.

Plants should be set in rows seven feet apart with the plants nine feet apart in the rows. Raise them as you would a Dewberry as to posts and wire if you do not want them on the ground. The Youngberry is a remarkable grower, so fertilize it well. Oftentimes a vine will grow from 15 to 24 feet in one year. Don't prune Youngberries the first year, allow all the wood to mature even if they get 12 to 20 feet long. Put up on trellis or wire. Just prior to picking would advise cutting off all new growth to about a length of 8

inches. This makes picking easier and these stubs will produce all the wood needed for the next year's crop. Price of Youngberry Plants, 12 for \$1.50; 25 for \$2.75; 100 for \$10.00.

Raspberries

LATHAM This remarkable and very desirable new variety is certified absolutely mosaic-free, and acceptable anywhere. Latham is perfectly hardy, withstanding Manitoba winters without protection. How to Grow Annual Flowers from Seed

All annual flowers are easily and most successfully grown from seed and offer a large field for selection. No matter for what purpose you may want flowers—for cutting, for garden beds, for color, or for foliage effect—you will find ample material among them from which to select. In buying flower seeds it is a matter of greatest importance to you to know that the seeds you are getting have been produced from the best plants—those bearing the finest flowers. It is only through great care in breeding, constant and most careful reselection, that plants and flowers are brought up to and kept at a high standard of perfection. Our seeds are secured only from such strains.

SOWING OF ANNUALS All annuals can be sown in the garden in March when the ground is warm, either in a seed bed or directly in the spaces where they are to grow. There are some annuals, such as Poppies, Eschscholtzia, Mignonette, Centaurea, and the like, which, on account of lack of fibrous roots, cannot be transplanted without a great set-back to the plant. These should be sown, either broadcast or in rows, in the location desired. Most of the annual flowers, however, benefit by being transplanted as it develops for them a better root-system. These are better started in a coldframe or a specially prepared seed-bed of rich soil, deeply dug and finely sifted on top. Sow the seed in shallow drills or in squares of a convenient size, partitioned off with laths. Most flower seeds are small and can only be covered with about $\frac{1}{8}$ inch of soil; the very fine seeds are simply pressed into the soil. Water carefully through a fine hose so as to wash the seed out, and keep the soil moist constantly. On warm, sunny days some shade should be given during mid-day. When the seedlings are large enough to handle, they can be transplanted 1 inch apart into another seed bed, or if they are not too close together, they may be left in the original bed until large enough to transplant into permanent places. Always remember that flowers need rich soil, an open sunny situation, and sufficient space between plants for proper development.

ANTIRRHINUM (Snapdragon)

For gorgeous coloring few flowers can match Snapdragons. The flowers are of very large size, very fragrant and are produced on immense long spikes, which render them extremely well adapted for cut-flowers. They are easily raised from seed in any rich sunny bed.
